	MCQ	Choices	Correct
1	What is Node.js primarily used for?	a-> Building client-side applications    b-> Executing JavaScript code server-side    c-> Creating mobile applications    d-> Managing databases	b
2	Which engine is Node.js built on?	a-> Gecko    b-> V8    c-> SpiderMonkey    d-> Chakra	b
3	What type of architecture does Node.js operate on?	a-> Blocking    b-> Event-driven    c-> Procedural    d-> Object-oriented	b
4	What is the key advantage of using Node.js on both client and server sides?	a-> Code isolation    b-> Code duplication    c-> Code sharing    d-> Code obfuscation	c
5	Which is NOT a method of asynchronous programming in Node.js?	a-> Callbacks    b-> Promises    c-> Synchronous functions    d-> Async/await	c
6	What is the default package manager for Node.js?	a-> Yarn    b-> Bower    c-> npm    d-> Gradle	c
7	Which module system does Node.js use?	a-> AMD    b-> ES6 Modules    c-> CommonJS    d-> UMD	c
8	Which is NOT a built-in library in Node.js?	a-> fs    b-> http    c-> express    d-> net	c
9	What is Express.js used for in Node.js?	a-> Database management    b-> Web server creation    c-> Frontend development    d-> Testing	b
10	Which protocol supported by Node.js is ideal for real-time communication?	a-> HTTP    b-> TCP    c-> WebSocket    d-> UDP	c
11	What makes Node.js highly scalable?	a-> Blocking architecture    b-> Synchronous programming    c-> Event-driven architecture    d-> Static typing	c
12	What architecture is Node.js well-suited for?	a-> Monolithic    b-> Microservices    c-> MVC    d-> Component-based	b
13	What type of computing environment commonly uses Node.js?	a-> Distributed computing    b-> Cloud computing    c-> Edge computing    d-> Serverless computing	d
14	What is a key feature of Node.js for cross-platform development?	a-> Native code compilation    b-> Operating system restrictions    c-> Platform-specific APIs    d-> Cross-platform compatibility	d
15	What does the Node.js community contribute to its ecosystem?	a-> Closed-source libraries    b-> Obsolete tools    c-> Active development    d-> Resource limitations	c

Review

The provided multiple-choice quiz for Node.js students covers a range of topics related to Node.js, including its usage, architecture, programming concepts, package management, module system, libraries, frameworks, protocols, scalability, architectures, computing environments, cross-platform compatibility, and community contributions.

The complexity of the questions varies from basic to intermediate level, suitable for students with a foundational understanding of Node.js concepts. The questions are clear, concise, and directly related to the information provided in the summary of Node.js.

The tone of the quiz is informative and educational, aiming to test the knowledge and comprehension of students regarding Node.js fundamentals. The questions are well-structured, and the options provide a good mix of correct and distractor choices to challenge the students' understanding.

Overall, the quiz is well-designed for assessing students' knowledge of Node.js basics. However, if
